

YSU ASDS – Applied Statistics with R Course Syllabus, Fall 2018

Course Title: Applied Statistics with R

Number of Credits: 6

Instructor's Name: Michael Poghosyan

Instructor's Email Address: michael@ysu.am, mpoghosyan@aua.am

Instructor's Telephone Number: (091) 202613 (mob.)

Instructor's Office Location: YSU MMF #209, AUA PAB #335W

Instructor's Office Hours: by an appointment

Teaching Associate: ????

TA's email address:

TA's Office Hours: TBD

Problem Solving Sessions: TBD

Term/Year: Fall 2018

Class Schedule: Tue, Fri 20:00 – 21:30

Course Description:

This course provides students with a general introduction to statistical modeling and inference, including topics such as descriptive statistics, estimation in parametric models, risk evaluation, maximum likelihood method and method of moments, Bayesian approach, confidence intervals, statistical hypotheses testing, multiple linear regression, least-squares estimation, significance of the coefficients, goodness-of-fit tests, and chi-squared test of independence. Students will develop basic skills in data modeling and gain proficiency in R software.

Required Materials:

Main Textbooks:

[Wasserman] **All of Statistics: A Concise Course in Statistical Inference**, *Larry Wasserman*,
Springer Texts in Statistics, 2004

[Devore] **Modern Mathematical Statistics with Applications (Second Edition)**, *Jay Devore*,
Kenneth N. Berk, Springer, 2012

Additional reading:

[CasellaBerger] **Statistical Inference** (Second Edition), George Casella, Roger Berger, Duxbury,
2002

Software:

R, <https://cran.r-project.org/> (**freeware**)

Schedule & Topics:

Week	Topic	Reading
Week 1	Descriptive Statistics Univariate Analysis	Devore, Ch 1
Week 2	Descriptive Statistics Univariate and Bivariate Analyses	Devore, Ch 1
Week 3	Reminder on random variables and convergence: <ul style="list-style-type: none"> – Quick review on Discrete and continuous random variables, their important characteristics – Types of convergence – CLT and LLN 	Wasserman, Ch 2, Ch 5
Week 4	Models, Statistical Inference and Learning <ul style="list-style-type: none"> – statistical models: parametric vs non-parametric – statistical problems: estimation, confidence intervals and testing Parametric Inference <ul style="list-style-type: none"> - Parameter estimation 	Wasserman, Ch 6
Week 5	Parametric Inference <ul style="list-style-type: none"> - Method of moments - Maximum likelihood estimator (MLE) - Consistency of the method of moments 	Wasserman, Ch 9
Week 6	Parametric Inference <ul style="list-style-type: none"> - Consistency of the MLE - Asymptotic normality 	Wasserman, Ch 9
Week 7	Parametric Inference <ul style="list-style-type: none"> - Bayesian Estimation 	Wasserman, Ch 11, CasellaBerger, Ch 7
Week 8	Parametric Inference <ul style="list-style-type: none"> - Fisher information - Cramer-Rao bound 	Wasserman, Ch 9
Week 9	Confidence intervals (CI) <ul style="list-style-type: none"> - CI based on the Tchebychev inequality - CI based on a pivotal quantity - The case of normal distribution 	Wasserman, Ch 9
Week 10	Hypotheses Testing <ul style="list-style-type: none"> - Introduction to hypotheses testing - Testing simple hypotheses: Neyman-Pearson lemma 	Wasserman, Ch 10

YSU ASDS – Applied Statistics with R Course Syllabus, Fall 2018

Week 11	Hypotheses Testing <ul style="list-style-type: none">- Testing composite hypotheses: Wald test and likelihood ratio test	Wasserman, Ch 10
Week 12	Linear regression <ul style="list-style-type: none">- Simple linear regression and least squares estimator (LSE)- Multiple regression	Wasserman, Ch 13
Week 13	Linear regression <ul style="list-style-type: none">- Properties of the LSE in the general case- Properties of the LSE in the Gaussian case	Wasserman, Ch 13
Week 14	Linear regression <ul style="list-style-type: none">- Testing the significance of the coefficients- Coefficient of determination R^2	Wasserman, Ch 13
Week 15	Goodness of fit tests <ul style="list-style-type: none">- Pearson's χ^2 Test for Multinomial Data- Pearson's χ^2 Test of independence- Kolmogorov-Smirnov test	Wasserman, Ch 10

YSU ASDS – Applied Statistics with R Course Syllabus, Fall 2018

Method of Evaluation

Midterm 1 (M1)	25 %
Midterm 2 (M2)	25 %
Final Exam (F)	40 %
Homework (HW)	10 %
Total	100 %

So the Grade Calculation Formula is:

$$\text{Total} = 0.1 * \text{HW} + 0.25 * (\text{M1} + \text{M2}) + 0.4 * \text{F}$$
